Flywheel-Supply.com

This reproduction coil for the model 92 Maytag is much hotter than an original and will provide years of service for your engine. **Visit our website to view an installation video!**

Install the coil as shown in picture #1, the spark plug wire **MUST** make an abrupt turn and go to the rear or it will be damaged by the flywheel. This damage will not be covered under warrantee.

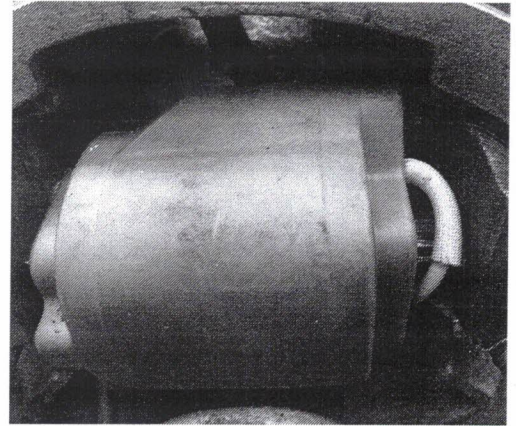

The yellow wire on the right side of the coil is ground and must stay connected to the laminate as it comes.

The yellow wire on the left side runs to your points and should connect there with the condenser as shown in picture #2.

Using a new condenser not only simplifies installation it's also required for warranty.

You should then pull the wires up out of the way after connected and install a tie strap as shown to prevent them from catching in the flywheel. Make sure they are out of the way, damage such as this will not be covered under the warranty.

This coil is warrantied from the date of purchase for a period of two years to the original purchaser provided it is installed correctly and used with the proper condenser. Using it in an application other than a Maytag engine will void the warrantee.
